

Test (2 hours)

Accura-tech need to create a single page web application to add employee details. They want following details be added.

First Name

Last Name

Gender

Date of Birth

Address

Department

Basic Salary

You need to create a table called employee and department to create a single page application. It should be a web application with .Net Core backend and Angular 2 or 2+ for the client side. When you are creating the web application, you need to focus on following facts.

- When the applications starts all employee records should be display in a table.
- There should be an option to create new employee.
- It should be able to update each employee.
- Provide the facility to delete an employee whenever we want.
- The basic salary should always invisible. There you be an option to make it visible whenever we want.

Zip your project folder with a Database script and please send to himali@accura-tech.com
